

THE SCIENTIFIC RESEARCH - WORK OF TEILHARD DE CHARDIN

I.Z. Nagy

Summary

On the occasion of the centenary of Teilhard de Chardin's birthday, the author introduces his scientific research-work. Besides his paleontological and geological results, he refers his archeological and paleoanthropological activity as well. His investigations on Tertiary and Pleistocene mammals are undoubtedly of pioneering importance. Finally he mentions the German paleontological institutions that joined into the research of this field.
