

SOME NOMENCLATORIAL PROBLEMS OF TURRILITIDAE /CEPHALOPODA,
AMMONOIDEA/ AND THE PHYLOGENETICAL AND STRATIGRAPHICAL
RELATIONSHIPS OF THE FAMILY

István Zoltán NAGY

The author presents the widely debated nomenclatorial problems concerning the generic names Turrilites and Mariella. According to the rules of ICZN, the use of the name Mariella is suggested. The author reviews the studies made by KLINGER and KENNEDY /1978/ on the phylogeny and systematics of turritids. On this basis, the stratigraphical position of the representatives of the family, occurring in Hungary, is given.
